

# JUST STREETS

Mobility **JUST**ice for all: framing safer, healthier and happier **STREETS**

JUST STREETS is a project conceived and led by a consortium of 30 partners spread out over 12 European countries, which arise from the desire to deconstruct the narrative that the street is the place for motorized mobility only. The primary objective of JUST STREETS is to support cities in promoting, improving and converting to a more just, equal and active mobility, with a special focus on marginalized and vulnerable user groups, according to a bottom-up logic and methodology.

JUST STREETS encourages walking, cycling and other micro-mobility, stimulating, at the same time, infrastructural interventions and transformative behavioral changes. The former support the improving of accessibility, safety, sustainability and digitalization of infrastructure and services; the latter promote awareness and trigger systemic change through participation, collective responsibility and co-creation.

The perspective is of a new narrative that embodies the vision of spatial justice. For JUST STREETS, streets have to be redesigned to let everyone stay, live, meet, interact and get involved, thus creating a greater sense of belonging, integration, trust and connections between people.

In the project, these innovative solutions are developed in eight pilot cities by adapting them to local socio-demographic characteristics and major mobility challenges. Subsequently, four cities will be associated with two pilot cities each to validate the innovative design solutions.

Keywords: digitisation, inter- and trans-disciplinarity, gender differences, human-centred street, co-creation.

This project has received funding from the European Union Horizon Europe

## PROJECT DURATION

From 1/01/2024 to 30/06/2027

42 months

## WEBSITE AND SOCIAL MEDIA

Under construction

## PARTNERS
