

RESERVAQUA 2

Implementation of a network of services for the study, protection, enhancement and sustainable management of WATER at local and regional level on a cross-border Alpine territory

The objective of the activities carried out within the project is the communication and capitalization of the activities of the RESERVAQUA project.

Give maximum visibility to the many products that have emerged within the RESERVAQUA project and enhance the activities undertaken with a view to knowledge, protection and protection of water resources, paying particular attention to climate change scenarios, also in light of the recent drought and water scarcity of the winter-summer 2022 period. These conditions, in fact, not only affect the life and habits of mountain populations, but have a strong impact on the activities of the plain (ex. agriculture).

Dissemination activities aim to capitalise on the massive amount of work carried out within the RESERVAQUA project; the planned activities complement and refine the knowledge and products resulting from the project that could not be implemented due to lack of time and/or economic resources.

The Polytechnic of Turin will deal mainly with two activities.

A participatory event possibly involving other partners, addressed to primary and secondary schools with the intent to raise awareness and raise awareness of the population since childhood to the theme of water resources, in the context of climate change adaptation strategy activities. And the organization of conference events and/or workshops in synergy with other partners, possibly involving the Authorities of the relevant Regions involved in the project, with the intention of disseminating the monitoring actions carried out during Reservaqua, stressing the importance of these actions especially in the Alpine environment and in relation to the groundwater resource. This activity will aim to inform and educate the population on the vital role of water, threatened in a context of Climate Change and continuously evolving.

PROJECT DURATION

9 months

(dal 14/09/2022 al 14/06/2023)

PARTNER

- Regione Autonoma Valle d'Aosta (Coordinator – IT)
- Politecnico di Torino – DIATI
- IAR: Institut Agricole R gional di Aosta
- FONDAZIONE MONTAGNA SICURA
- ARPA VALLE D'AOSTA
- ARPA PIEMONTE

FUNDING INSTRUMENT

Programma di Cooperazione INTERREG V-A ITALIA – SVIZZERA 2014-220

BUDGET

Total funding : **237.726,73€**

Funding DIATI : **39.942,72 €**

POLITO and DIATI's role:

Politecnico di Torino – DIATI is a member of the Consortium, under the scientific responsibility of **Prof. Glenda TADDIA**

RESERVAQUA is a project funded under the European Territorial Cooperation programme INTERREG V-A Italia-Svizzera 2014-2020
