

Effetto di accumuli detritici sull'erosione localizzata alla base delle opere di sostegno situate in alveo

Francesco Giordana, Costantino Manes

INTRODUZIONE

Trasporto di LWD

Accumuli alle pile

Cedimenti*

*1/3 dei cedimenti totali è causato da accumuli detritici (USA, UK)²

Figura presa da [2]

Figura presa da [2]

Figura presa da [3]

OBIETTIVI

Approccio fluidodinamico, vedere Manes & Brocchini (2015)¹

Dinamica ed evoluzione del vortice a ferro di cavallo, data l'occlusione al passaggio del flusso d'acqua

Massima altezza di scavo a monte della pila

Evoluzione dello scavo ai fianchi e a valle della pila

METODOLOGIA

① Esperimenti di laboratorio

Figure prese da [4] e [5]

② Simulazioni numeriche

Figure prese da [3] e [4]

Visualizzazione vortice a ferro di cavallo (PIV)

Visualizzazione campo di moto (DNS)
